ABSTRACT

This document is the third part of a 3-part report on the development of a generic State Educational Agency Data Analysis Plan (SDAP). It consists of a compendium of data available by program within the studied State education agencies. The compendium provides a direct comparison of the information elements that are available by program in the two SEAs and in the Federal/State data system. These comparisons from a partial basis for the SDAP tables, since the data availability was used as a direct indication of where a given type of data or information could be found at the SEA level. This part also contains explanations of the tabular presentations and of special notations used in these presentations. It also briefly defines the relationship of this compendium or a similar SEA-specific one in the utilization of the SDAP - Model I by other SEAs. Related documents are EA 004 869 and EA 004 870. FOREWORD

This document is Part III of a three part report on the development of a generic State Educational Agency Data Analysis Plan (SDAP - Model I). This development has been performed by Scientific Educational Systems, Inc., under subcontract to the Ohio State Department of Education acting as agent for the Joint Federal/State Task Force on Evaluation and the U. S. Office of Education. This effort was undertaken at the request of the User's Guide Task Force (a sub group of the Federal/State Task Force) interested in the development and dissemination of products usable by the State Educational Agencies (SEA's). This generic SDAP is intended to be usable by SEA's as an illustrative model of how State and Federal data can be used to answer some of the many diverse information needs related to management of educational support programs operated by and within the SEA's.

Part I of this report presents additional background information as well as describing the developmental process followed in producing the SDAP - Model I. Part I contains an overview of the entire effort and the resulting products and discusses how these products can be used by SEA's as a model for their own development of specific data analysis plans. It also contains a detailed description of the Developmental Process which was followed in this effort. This latter product is intended to serve as a general guide to SEA personnel interested in either further extension of the current products or undertaking the independent development of data analysis plans for their SEA's.

Part II contains the SDAP - Model I, itself, the major product of the study. This consists of a set of analysis statements directed at defining answers to a series of questions pertinent to the management of SEA programs. The SDAP itself is presented in a series of tables containing: (a) the questions derived through the study for each of fifteen programs found common to the two SEA's studied; (b) the suggested data analysis to provide the answer sought; and (c) the probable source of the data required for analysis, (these sources include both State and Federal data streams.) This Part also presents a description of what each of these elements is and how the plan can be utilized within the context of the SEA data analysis concepts.

Part III consists of a compendium of data available by program within the studied SEA's. The compendium provides a direct comparison of the information elements which are available by program in the two SEA's and in the Federal/State data system. These comparisons form a partial basis for the SDAP tables, since the data availability was used as a direct indication of where a given type of data or information could be found at the SEA level. This part also contains explanation of the tabular presentations and of special notation used in these presentations. It also briefly defines the relationship of this compendium or a similar SEA-specific one in the utilization of the SDAP - Model I by other SEA's.

INTRODUCTION

This compendium presents a listing and comparison of the data elements found for each program in the two SEA's studied in detail. These listings of data found in Connecticut and Colorado programs have been compiled to support the development of the SDAP - Model I. These listings have been used in both the definition of analysis statements to answer questions and the identification of probable data sources in the SDAP. It is also anticipated that this compendium may be useful to SEA personnel interested in developing their own data analysis plan: the data sets defined here and the comparisons to the Federal/State data system should be helpful in locating local data sets already existing or in defining new needs for data collection. Additional discussion of the use of this compendium in relation to the SDAP - Model I is presented in Part I.

The following sections describe the purpose and scope of the compendium and the process and special nomenclature used in its preparation.

Purpose and Scope

The Compendium provides, in tabular form, a description of the program data availabilities in Connecticut and Colorado and identifies the commonalities and differences in data across the states and in relation to the Federal/State Data System instruments*. This comparison of data availabilities allows the identification of: (1) those data types which are identical in both States, (2) those data types which are used in one state but which are not available in the other, and (3) those data types which are similar across the States and Federal/State Data System, but which are not identical.

---

* This general term (abbreviated F/SS) includes the following instruments: The Consolidated Program Information Report (CPIR), The Elementary School Survey-District Questionnaire (ESS-Di), Principal Questionnaire (ESS-Pr), Teacher Questionnaire (ESS-Te), and Pupil Questionnaire (ESS-Pu).

This categorization of data types allows the identification of those identical items which may be used to answer questions specified in a State Data Analysis System designed for use by more than one state; and also those data types which, despite differences of a specified nature, may still be found useful for answering SDAP questions.

The compendium was constructed by program for each of the Common Programs and includes a section entitled "General Statistics" for the description of data availabilities which did not belong with any particular program. The following lists the program sections in the Compendium:

A. School Assistance in Federally Affected Areas Program
B. Management of General State Grants Program
C. School Food Services
D. Transportation Grants Administration Program
E. School Library Program
F. Compensatory Education Program
G. Migrant Program
H. Driver Education Program
I. ESEA Title III Grant Management Program
J. Special Education Program
K. Adult Basic Education
L. NDEA Title III-A Program
M. Vocational Education Services Program
N. Drug Abuse Program
O. Bilingual Education Program
P. Education Professions Development Program
Q. General Statistics

Data Categorization

The data types were extracted from the Connecticut forms first and listed in the Data Type Column. The form and item numbers were then noted*. The data types were then compared with the Colorado data and were classified as to being identical or different. After the listing for Connecticut was complete the Colorado data types that were not already

* If the form or item did not have a number "No Form No." or "No Item No." was written in this column. The absence of any notation whatsoever (blank) in any form and item column indicates that that data type is unavailable in that State or the F/SS instruments.

used in comparison with the Connecticut data types were listed. All data elements were then compared to the Federal/State Data System data elements and classified accordingly.

The method of categorization of data types into identical and different categories needs some additional explanation. For example, there are four possible ways for a data type to be identical: (1) Connecticut and Colorado, (2) Connecticut and Federal/State Data System, (3) Colorado and Federal/State Data System, and (4) Connecticut and Colorado and Federal/State Data System. These four combinations are also possible in each of the three sub-categories of data difference, i.e., (1) by source or level of collection; (2) by time of collection, and, (3) by category breakout. In addition, it is possible for a data type to be identical across Connecticut and Colorado and for both to be different from the Federal/State Data System by, say, source or level of data collection. This means that in many cases a particular data type will have more than one category column filled in. When this occurs, a careful reading of the column contents should make these data relationships clear.

The column headings and the basic usage in development of this tabular presentation are as follows:

Column Names	Usage
1. Data Type	Brief Description of the information requested by the form, and the form title, when applicable.
2.a. Connecticut Form and Item; b. Colorado Form and Item	Form and item number serves to locate the data types.
3. Federal/State Variable	F/SS form and item numbers serves to locate the data types.
4. Identical	This column uses abbreviated State names or F/SS to indicate that the data type is identical across the specified States and/or F/SS instruments.
5. Different (a) Source or Level	This column uses abbreviated State names or F/SS to indicate that the data type differs only in the level at which it is collected, e.g., SEA vs. LEA, or in the source from which it is collected, e.g., sponsoring agency vs. school district.

Column Names	Usage
(b) Time Collection	This column refers to broad differences in time of collection as indicated by the type of form, e.g., Application vs. Final Report.
(c) Category Breakout	This column refers to differences in the way in which a particular data type is divided into categories, e.g., grade level vs. grade span.

Under the data type column asterisks have been assigned to those information items which have been used in support of analysis statements in SDAP-Model I in Part II

DATA COMPENDIUM

The tables follow in the order of the program areas listed above. Numbering of tables is by the letter shown above and pages within each program set.
